

EMBURSE GO PREMIER

The **all-in-one** travel companion app

When your employees are on the go, they need a mobile travel companion that makes their lives easier and helps guide them. Juggling multiple supplier apps to manually piece together their itinerary is time consuming and lowers productivity.

Emburse Go Premier gathers all of your travelers reservations into a user-friendly companion app to create one single itinerary. It helps in pre-trip planning with useful destination information including health and safety requirements and manages on-trip events such as restaurant, air, hotel reservations and ground transport options. Instant access to flight alerts and local city guides as well as corporate travel benefits and policy information keeps employees engaged and focused on business outcomes.

SIMPLIFY

Integrate all your suppliers into one single platform to streamline your travel program and increases employee satisfaction.

CUSTOMIZE

Fully branded app with built in travel policies allow you to share program benefits within company guidelines.

ENGAGE

Powerful in app messaging capabilities enable contextual communication to keep employees informed, safe and supported.

Drive more value from every trip

Emburse Go Premier syncs with all of your suppliers including OBT, TMC, and Duty of Care providers to streamline your processes and minimize friction moving between apps to manage pre and on trip events.

After booking a trip, all upcoming travel details load directly into the app by PNR feed, emailing itineraries, or inputting manually. The messaging center displays relevant information such as city guides, office locations, visa, and health requirements to help travelers plan ahead.

Notifications nudge employees to adhere to policies (like booking windows and selecting preferred vendors) to maximize travel ROI. Duty of Care features help you monitor employee locations and provide additional support in an emergency. Destination specific tips like local music, restaurants and wellness activities keep them engaged and delighted.

Gathering backend data is most important. Emburse Go enables us to understand where our people are staying, what they are spending on, and what they are doing during the trip.”
